

21460-60Y00 21460-65Y02 21460-66Y00 Aluminum Car Radiator Parts Superior for Engine Cooling Systems

Basic Information

Place of Origin: CHINABrand Name: NABO

• Certification: TS16949

• Model Number: 21460-60Y00/65Y02/66Y00

• Packaging Details: poly bag or air bubble bag, any boxes with

customers' label, Corrugated box, Standard

tray

Delivery Time: 3-35 daysPayment Terms: D/P, L/C, T/T

Product Specification

Material: AluminumType: Car Radiator

Name: Automobile Spare Parts

Size: StandardCountry Of Origin: ChinaWarranty: 12 Months

Product Description:

When it comes to a vehicle's cooling system, the car radiator plays a crucial role. Not only does it help regulate the engine's temperature, but it also helps dissipate the heat generated during the combustion process. Without a properly functioning radiator, a car engine could overheat, which can lead to engine damage and a hefty repair bill.

A typical car radiator is made up of a series of thin metal tubes or channels. These tubes, also known as the core, are connected to inlet and outlet tanks. The core is typically made of aluminum, which has excellent heat conductivity. The tanks, on the other hand, are typically made of either plastic or aluminum, which makes them lightweight and easy to mold.

Features:

Looking for a reliable car radiator that can provide a high level of heat dissipation efficiency? Our car radiator design boasts a high-density core which features thin metal tubes and cooling fins that promote maximum surface area for heat transfer. With this construction, your engine's generated heat is efficiently dissipated, guaranteed to cool the coolant and maintain optimal operating temperature. Our radiator is a durable auto part that can handle the demands of daily driving. Made of sturdy and corrosion-resistant aluminum, this radiator has excellent heat conductivity and can withstand wear and tear. Its inlet and outlet tanks are crafted from high-quality materials to ensure long-lasting performance.

Get enhanced cooling performance from our advanced car radiator design. This product has tubes, fins, and coolant flow paths that are arranged to maximize cooling efficiency. Our radiator ensures your engine stays at a safe and consistent temperature, reducing the risk of overheating and potential engine damage.

We only offer car radiators that meet the highest standards of reliability and performance. We use stringent quality control processes when sourcing and constructing our radiator parts. Each radiator undergoes rigorous testing to ensure optimal cooling efficiency and durability. Our quality assurance is designed to give you the confidence that you are working with the best product.

We offer a comprehensive warranty on our car radiator products, so you can be sure you're getting the best deal and reliability. We stand behind the quality of our auto parts and provide our customers with peace of mind that their radiator is protected against any manufacturing defects or faults for a specific period of time. Get in touch with us to learn more about our warranty program.

Technical Parameters:

Country of Origin	China
Material	Aluminum
Size	Standard
Туре	Car Radiator
Name	Automobile Spare Parts
Warranty	12 Months

Applications:

The main purpose of a car radiator is to keep the engine cool by transferring heat from the coolant circulating through the engine to the surrounding air. This is accomplished through a combination of conduction, convection, and radiation.

If you're looking to improve your vehicle's cooling system, consider upgrading it with our high-quality Car Radiator. With this premium product, you'll experience improved cooling performance, optimal engine temperature, and reliable operation. You can trust in the durability and efficiency of our Car Radiator to keep your engine running smoothly and prolong the life of your vehicle.
